

# **Person-Centered Design, Patient-Centered Healthcare**

2019 CAPH/SNI Annual Conference

Stacey Chang

Executive Director

@Stacey\_Chang

Nobody believes that our  
current healthcare system has  
achieved perfection.

In healthcare,  
we never get the opportunity  
to design a new model  
that embraces wholesale change.

*rarely* In healthcare,  
~~we never~~ get the opportunity  
to design a new model  
that embraces wholesale change.

# In Austin

A new property tax = a new hospital + a new medical school + a unique payer

What is the role of  
Design in Health?

To provoke  
systemic change in health  
through design.

## Practice Areas

Product Design

Environments Design

Communication Design

Service Design

Organization Design

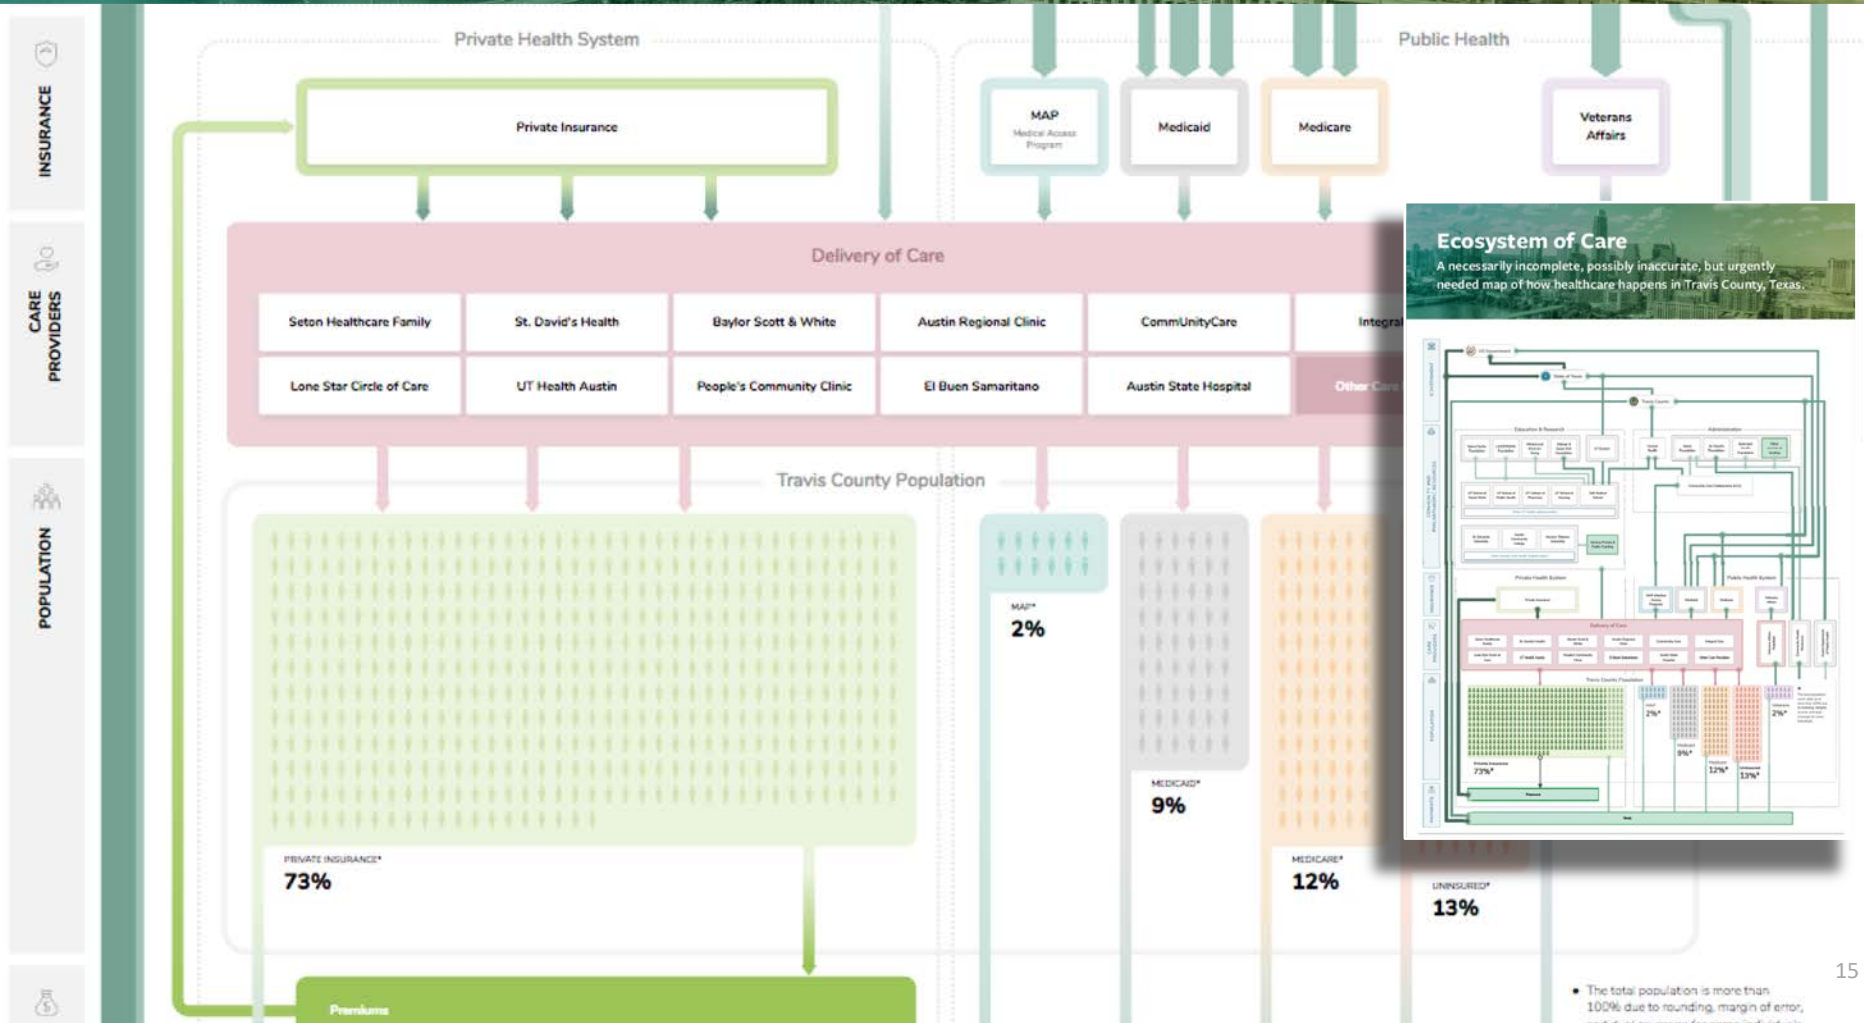

Systems Design

A systemic view of care

# Ecosystem of Care

A necessarily incomplete, possibly inaccurate, but urgently needed map of how healthcare happens in Travis County, Texas.

A new model of care

## Patient

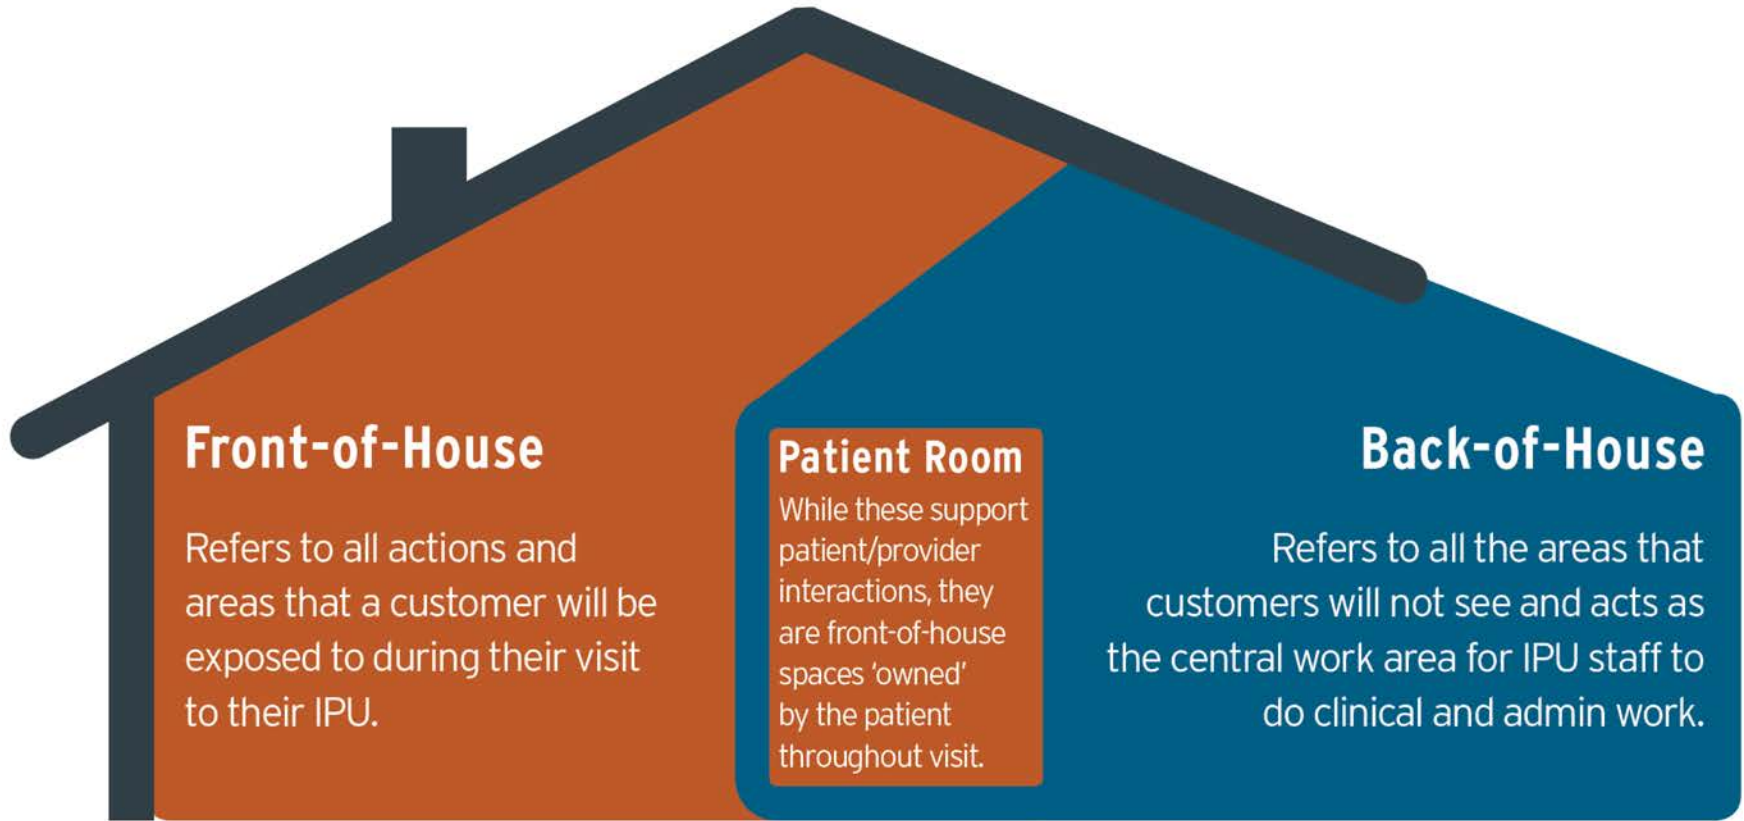

### Experience Principles

- 1 Make the patient the center of the experience
- 2 Set expectations for the journey ahead of time
- 3 Grant the patient control over some aspects of the journey
- 4 Engage the informal caregivers
- 5 Decrease the authority gap between providers and patients

## Provider

### Experience Principles

- 1 Separate front and back of house activities
- 2 Facilitate informal interactions between staff
- 3 Create flexibility in space, and allow staff to optimize it
- 4 Enable and empower staff to own their roles

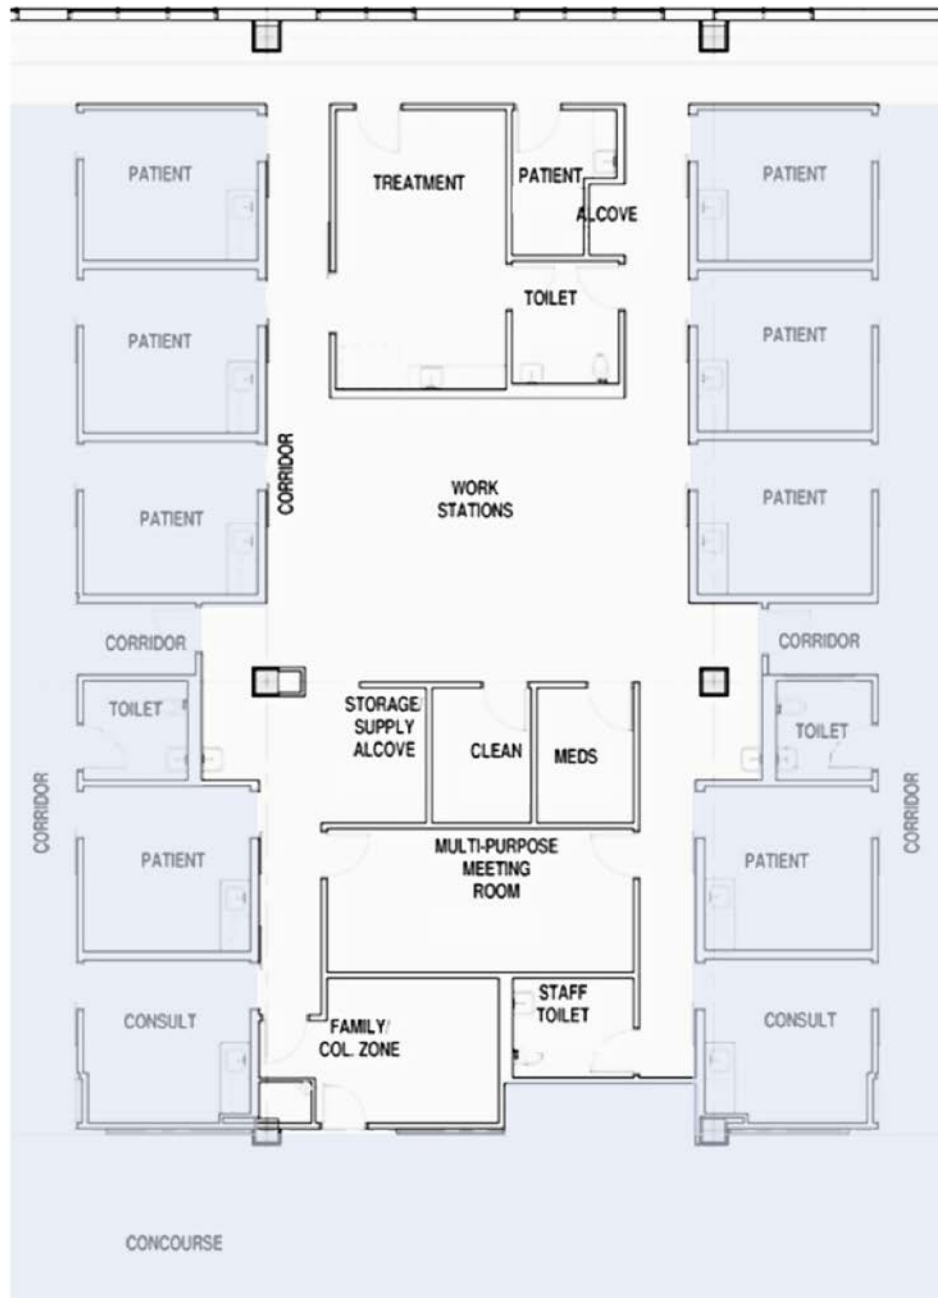

Traditional Patient Journey

IPU Patient Journey

Enabling the malcontents

Integrating social services into primary care

# Health Snapshot

To start, pick just one of the following cards:

I want to sleep better at night.

I want to have energy to do things after work or school.

I want to feel good when I look in the mirror.

I want...

# System intelligence and systemic intervention

**Emergent Property**

Waiting is the result of a system of uncoordinated providers of care, each with a revenue stream that can be unlocked only with the presence of an ill patient. This creates supply congestion at each care intake point.

**SYSTEM CHALLENGE**

Traditional clinical models prioritize efficiency to the detriment of patient experience.

**SYSTEM EFFORT**

Eliminate waiting rooms to improve patient experience.

**LEGEND**
